

Seto Inland Sea Regional Research Center has cooperated on the practical training of students of Tokushima Bunri University.

On November 6, 2020, Kagawa University and Tokushima Bunri University cooperated to conduct practical training for seven students of the Department of Nanomaterials Engineering, Faculty of Science and Engineering, Tokushima Bunri University.

Seto Inland Sea Regional Research Center has researched regarding marine environment, and it has many facilities for ocean observation such as research vessels and various measuring instruments. The department of Nanomaterials Engineering, Faculty of Science and Engineering, Tokushima Bunri University is also conducting researches and classes on marine micro organisms and substances. Therefore the two Universities have become to further deepen their research and educational cooperation.

This is the first time, two Universities conducted the practical training for students of Tokushima Bunri University by using facilities of Aji Marine Station.

Departure for the practical training on the research vessel Calanus III.

Observing blooms of Noctiluca. (luminous insects)

Observation of CTD value.

Divided into 3 groups from the recorded value to decide each water sampling layers.

Explanation of water sampling.

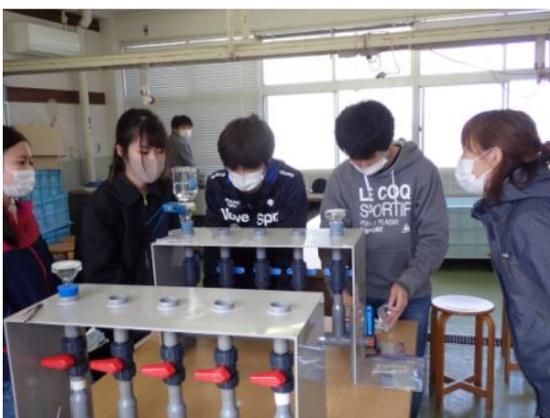

Collecting surface water by a bucket.

Collecting middle layer water was used the Van Dorn Water Sampler.

Filtering of the sampling water at the marine station.

Each group carefully filtering.

Commemorative photo.
