

Seto Inland Sea Regional Research Center has cooperated on the practical training of students of Tokushima Bunri University.

On May 31, 2021, Kagawa University and Tokushima Bunri University cooperated to conduct practical training for students of Tokushima Bunri University.

Seto Inland Sea Regional Research Center of Kagawa University has researched regarding marine environment, and it has many facilities for ocean observation such as research vessels “CalanusⅢ” and various measuring instruments.

The department of Nanomaterials Engineering, Faculty of Science and Engineering, Tokushima Bunri University is also conducting researches and classes on marine micro organisms and substances.

For the reason, the two Universities have been further deepening their research and educational cooperation.

It is the 2'nd time following last year that the practical training for students of Tokushima Bunri University by using “CalanusⅢ” and facilities of Aji Marine Station.

Measurement of seawater transparency.

Water sampling by Van Dorm Sampler.

Water sampling by Plankton Net.

From Plankton Net to Storage Bottles.

Cruising in the Seto Inland Sea on the “CalanusⅢ”.

Observations with microscope.

Filtration of seawater samples.

Moon jellyfishes in display aquarium.
