

# Seto Inland Sea Regional Research Center held the "2021 Super Science High School" for Takamatsu Daiichi High School at Aji Marine Station.

On June 28, 2021, The Seto Inland sea Regional Research Center held the Super Science High School "SSH" which titled "Familiar Sea Environmental Science". Participants were 38 students and 4 high school teachers.

The Center has been in charge of "SSH" for special science course of Takamatsu Daiichi High School 1st grade, every year. In this year, it was also conducted carefully enough by taking measures for corona infection.

The sea environment teaching in the "SSH" was lectures at the Marine Station, plankton observation with microscope and mini-ocean observation on the research vessel Calanus III.

This year, with the cooperation of teacher Miyoshi of Tokushima Bunri University, it was a very enjoyable ocean observation, such as using underwater drone.

The students asked a lot of questions, etc., they learned very eagerly.

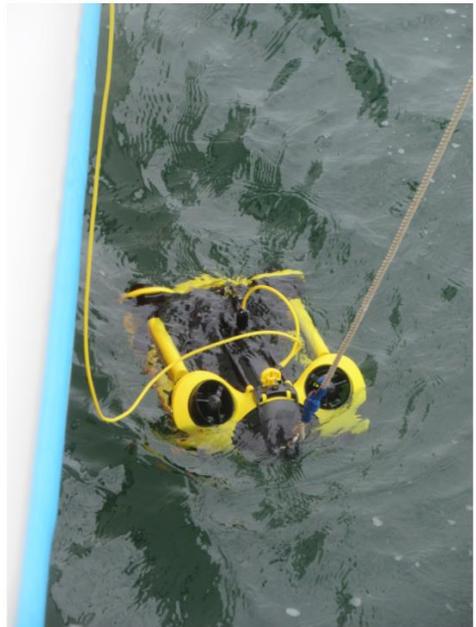

Staff meeting at outdoor, to avoid corona infection

lecture

Explanation for observation,  
on board the Calanus III

Underwater drone

Collection of samples by plankton-net

Observation of seabed mud

Observation of planktons with microscope
