The faculty has a practical curriculum guidance system with the concept of "development support" as its core, to train teachers with practical leadership skills and a high degree of expert knowledge in their fields. Each course is made up of a core curriculum of teaching practice and theory covering four years. Starting from their first year, students observe classes both inside and outside the university and reflect upon these experiences and observations. In this way, students deepen their understanding of the teaching profession. This also helps them when researching and writing their final graduation thesis. There are also several events organised by the students' courses promoting learning about cooperation in student life which also help students develop interpersonal skills in dealing with others. Every year the various courses put on events that are open to the public, such as 'Students from the Future' in which students work together to prepare for these events. The faculty, with its four-year course of learning, fully supports hard-working students' development and learning, supported by their colleagues, aiming at a career in teaching.

我が国のものづくり産業は「大量生産」「大量消費」の時代から、「ものづくり」さらには「ことづくり」におけるイノベーション創出の時代に変遷し ており、人々の多様なニーズに柔軟に対応できる個性豊かで付加価値の高い「もの」や「こと」を創り出す「デザイン思考能力」を有する人材が必要と されています。さらに、「もの」や「こと」が創造的で新しいものであればそれを実現するためには相対的に高いリスクが存在し、また、「もの」や「こ と」には平時にのみならず危機に瀕しても価値を発揮することが求められていることから、「リスクマネジメント能力」を有する人材も必要とされて います。創造工学部では、人間とその生活を取り巻く自然に焦点を当て、人間と自然が調和的に共生できる文化・安全・産業の創造を目指し、専門的 基礎能力に裏打ちされた幅広い工学のバックグラウンドを持ち、国際社会で尊敬される良き市民としての個性豊かな技術者を育成します。

Japanese industries whose lifeblood has been developing and manufacturing goods and products (the process of monozukuri) are now transitioning from the era of "mass production" and "mass consumption" to one that calls for innovation in the fields of crafting not just products (monozukuri) but also intangible things (kotozukuri). This situation calls for individuals who possess the design thinking skills to create tangible and intangible things with high-added value and abundant distinctive features that permit flexible responses to people's diverse needs. Furthermore, if the ideas about tangible or intangible things that we come up with are truly new, then making them a reality will always carry with it a considerable amount of risk. Additionally, these "things" of whatever nature may also be called upon to be of use not only in ordinary situations but also in times of crisis. Accordingly, it will be necessary to have people around who have the ability to manage risk. At the Kagawa University Faculty of Engineering and Design we will nurture engineers of great individuality who will be good citizens respected by the international community. Our students will be mindful of the natural environments in which people live; will seek to create culture, a climate of safety, and industry that allow for humans and nature to harmoniously coexist; and will have a broad background in the engineering that provide the backing/lining for expert fundamental skills

Science, technology, and engineering represent one of the mainstays that ensure the remarkable progress in modern society. Our society is incessantly becoming more complex, more information-intensive, and more globalized, making it difficult for modern engineers to resolve their problems with expertise from specific areas only. This is why graduate school education is expected to train engineers to be able to act only with specialized knowledge, but also from a broader and interdisciplinary perspective.
