

Training for high school biological teachers

Seto Inland Sea Regional Research Center conducted a training for high school biological teachers in Kagawa Prefecture on September 17, 2019. It conducted at the marine station of Research Center and used research vessel called "Calanus III". It's participants were 32.

This training key-word was "Bivalves". They were received lectures about new trends of oysters and short neck clams. They also observed plankton by microscope.

They visited oyster aqua-farms in Shido bay on research vessel "Calanus III". They collected planktons by plankton-net to observe it.
